### Introduction

These release notes describe the bug-fixes and enhancements included in nordicAktiva software version v.1.1.3 released on April 16<sup>th</sup>, 2009.

### Overview

This update resolves 1 issue (bug) from nordicAktiva v.1.1.2, as described in the following sections.

*NOTE: Version 1.1 implemented a new license system in order to offer more flexibility in terms of licensing options for our customers. This system allows the user to choose between a code-activation key (equivalent to the previous license model) and a USB key activation.*

*The implementation of the new license system requires all nordicAktiva licenses prior to version 1.1 to be upgraded/re-activated. Please contact [sales@nordicneurolab.com](mailto:sales@nordicneurolab.com) for more information regarding this procedure and the licensing options.*

### Resolved Issues

Bugzilla #341

Running nordicAktiva on XP with a screen resolution of 800x600 made the navigation buttons disappear.

## **Supplementary Notes**

The software can be downloaded and updated from the company website:
